

Magnetic field experiment

Science Questions

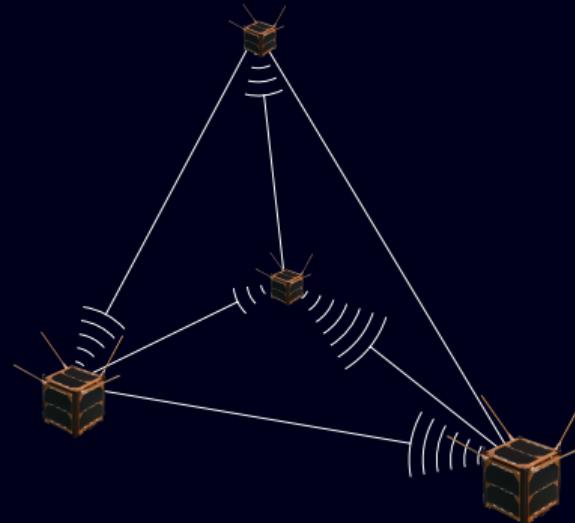

- Upstream Solar wind:
 - FS waves propagating to Lunar distances
 - large scale SW structures coordinated obs.
- Distant geomagnetic tail:
 - check the BS and MP models at Lunar distances
 - distant reconnection sites during substorms
- Circumlunar plasma:
 - morphology of Lunar interaction regions
 - influence of Solar wind conditions
 - influence of the Moon position in the geotail

Magnetic field experiment

Instrumentation

- Flux Gate Magnetometer
 - mounted on long boom on DSG
 - accurate measurements from DC to 100 Hz
 - tested technology
- Service Orientated Spacecraft Magnetometer
 - multiple sensors to measure sc generated fields
- Cubesat fleet
 - anisotropic magneto-resistance sensors
 - autonomous coordinated flight
 - external docking station with power and data

Technology benefits:

- improve SOSMAG
- test autonomous robotic swarm solutions
